

## Calling an API Using jQuery

```
$.ajax({  
    url: "...",  
    method: "...", // DELETE, POST, PUT, optional for GET  
    success: function(result){  
        ...  
    }  
});
```

## Bootbox

```
bootbox.confirm("Are you sure?", function(result){  
    if (result) {  
        ...  
    }  
});
```

## DataTables - Zero Configuration

```
$("#customers").DataTable();
```

## DataTables - Ajax Source

```
$("#customers").DataTable({
  ajax: {
    url: "...",
    dataSrc: ""
  },
  columns: [
    { data: "name" },
    {
      data: "id",
      render: function(data, type, row){
        return "...";
      }
    }
  ]
});
```

## DataTables - Removing Records

```
var table = $("#...").DataTable(...);
```

```
var $tr = $("#...");
table.rows(tr).remove().draw();
```
